

Android App User Guide

ReliQRA for Android lets you **photograph, identify, value, and track** your collectibles — coins, bullion, banknotes, cards, comics, and proof sets. Your collection lives in the cloud under the **same account** you'd use on iPhone, the web portal, or the browser extension, with the same features across platforms. This guide covers everything the app does.

ReliQRA LLC • Modern tools for serious collectors and dealers

01 Sign in

The app opens to a sign-in screen with three options. They all reach the **same account**.

- **Continue with Google** — a secure browser tab opens to choose your Google account, then returns you to the app.
- **Continue with Apple** — Apple sign-in works on Android too, via the same browser-based flow (*that's normal on Android*).
- **Email & password** — new accounts must **confirm their email**: open the message from *ReliQRA* (*noreply@reliqra.com*) and tap the link before signing in.

After sign-in your workspace loads and your inventory appears. A brief "no workspace yet" message just means your workspace is being created — give it a moment.

Match your accounts. Use the **same** sign-in method everywhere. Signing in with Apple's "Hide My Email" here but your real Google account elsewhere makes them look like two different accounts (separate inventory and Lookups).

02 Getting around — the five tabs & toolbar

The Reliqra Android inventory list, showing the spot-price HUD and toolbar, the active/unreconciled counts, the search bar, item rows, and the bottom navigation bar

Bottom navigation (around the center **Add** chip):

TAB	WHAT IT'S FOR
Collectibles	Your inventory — browse, search, filter, and open items.
CSV Tools	Marketplace and auction CSV exports.
Add (+)	The center chip — capture or add a new item.
Tools	Metal prices, Melt Guard, AI lookup, Greysheet, audits, auctions, reconciliation.
Settings	Account, plan & Lookups, BYOK, backup, and app preferences.

Top toolbar (on Collectibles):

- **Live metal HUD (left)** — current **silver (Ag)** and **gold (Au)** spot prices with up/down arrows. Tap to refresh; long-press a metal to open its calculator.
- **QR / barcode scanner** — scan a printed label to jump to an item and act on it.
- **Filter** — opens the filter sheet (tinted blue when a filter is active).

- **Overflow (:)** — Edit (multi-select), **Show/Hide Cost**, Filters, Pricing Lookup, Settings, Refresh, and Sign out.

03 Your inventory (Collectibles)

The header shows your **active** count, an **unreconciled** pill (amber, when any exist), an optional **archived** pill, and your remaining **Lookups** on the right. Below it is the **Search inventory** bar.

Each row shows:

- A **thumbnail** sized to the item — a **circle** for raw coins, a **rounded rectangle** for slabs, cards, and comics, and a **wide rectangle** for currency — with a ★ for key dates.
- The **title** and **PID#**.
- The **grade** (e.g. *Ungraded, MS-65*), a **status chip** (**RECONCILED** green · **UNRECONCILED** amber · **SOLD** red), an **eBay** badge if listed, the **cost** (when Show Cost is on), and the **value** in blue.

Swipe actions make quick work of a big collection:

- **Swipe right** — **Mark Sold** (active items) or **Restore** (archived items).
- **Swipe left** — **Mark Found / Mark Missing** (the reconcile toggle), or **Delete**.

Filter sheet options: **Status** (All / Active / Listed / Sold / Traded / Archived), **Reconciliation** (unreconciled only), **Type** (Coin / Currency / Bullion / Card / Comic / Proof Set / Other), **Price** band, **Denomination**, and **Sort** (date, value high→low / low→high, alphabetical).

04 Add & identify an item

Tap **Add (+)** to capture something new.

- 1 **Choose the item type** — **Coin, Currency, Bullion, Card, Comic, Proof Set, or Other**. The form adapts to that type.
- 2 **Add photos** — tap the **Front** and **Back** wells to open the in-app guided camera (or pick from your library). A **Graded Slab** toggle previews the right shape (rectangle for slabs, circle for raw coins).
- 3 **Identify** — Reliqra runs **AI identification** on the photos and **auto-fills** the form. If you prefer, tap **Analyze photos** · **1 lookup** to trigger it manually, or **enter details manually** without a photo.
- 4 **Review and edit**, set **cost** and **value**, choose a **status**, then **Save**.

Type-aware fields include:

- **Coins** — denomination, mint mark (P/D/S/O/CC/W), grade ladder, grader (PCGS/NGC/ANACS/ICG), proof, composition & silver %, weight, diameter, thickness, mintage, designer, edge, obverse/ reverse.
- **Currency** — note type, denomination, year, serial number, and **fancy-serial** type (solid, ladder, radar, repeater, binary, low serial...).
- **Bullion** — metal, fineness (.999 / .9999 / .925 / 22k / 18k...), form (round/bar/coin/ingot), weight.
- **Cards** — sports/trading, set name, card number, grader, grade.
- **Comics** — publisher, title, issue #, variant, grade.

If eBay is connected, a **List on eBay** picker (**Off / Once / Always**) lets you publish on save. The **Save** button reads **Save + List on eBay** when an auto-list mode is selected.

Lookups: each AI identification uses **1 Lookup**. Out of Lookups? The app shows an upgrade prompt — see §9.

05 The item detail view

Tap any item to open its detail. The **hero card** shows the front/back photos (with type-aware labels like *OBVERSE* / *REVERSE*), the title, **PID#**, mint/issuer, a **Greysheet®** badge when a catalog match exists, and a three-stat trio: **Value**, a type-specific middle stat (**Melt** for coins/bullion, **sold median** for cards, **9.8 FMV** for comics), and **P&L** (green up / red down). Up top you'll find **Edit**, a **Print label** button, and **Close**.

Below are **six tabs**:

TAB	WHAT'S IN IT
Overview	Type, denomination/year/mint, grade & grader, status, description and obverse/reverse notes, and a reconciliation toggle (Mark reconciled / Mark found) with the last-reconciled date.
Pricing	Inline Greysheet lookup (denomination, year, mint, grader, grade → CPG bid/ask) and Value Comps — eBay sold comps for coins, PriceCharting for cards/comics — with the Reliqra Estimate disclaimer.
Photos	Full-screen zoomable front/back photos.
Market	eBay and Whatnot listing status and order/sold info, when applicable.
Specs	Every recorded spec — composition, weight, dimensions, silver %, mintage, designer, edge, serial, set/series, key-date tag, and forward-compatible fields.
Timeline	Created/modified dates, status changes, sold date & price, and reconciliation history.

Mark as Sold (from the detail, a swipe, or a QR scan) opens a sheet with a **date** (default today) and a **sale price** (default = the item's value); confirming sets the status to Sold and marks it reconciled.

06 Selling — eBay & Whatnot

Connect eBay in **Settings**, then list from an item's detail with **List on eBay**. Reliqra runs a **readiness preflight** — eBay connected, inventory location set, and fulfillment/payment/return policies in place — and shows a **Setup required** card with guidance if anything's missing. Once ready, fill the **price**, **category**, **description**, and **package weight** and tap **List on eBay**. After listing you can view status and **revise / end / relist**.

Bulk publishing and a **marketplace dashboard** (active listings, order sync) are available, and **Whatnot** listing URLs are stored so you can manage delisting. For Whatnot **live shows**, the **Reliqra browser extension** marks items sold automatically as orders arrive — see the Browser Extension User Guide.

QR reconciliation: scan an item's printed label to see **Open in detail**, **Mark reconciled**, **Mark sold**, or **Add to auction CSV** — fast for checking in a stack of slabs after a show.

07 Tools

The **Tools** tab is a full toolbox. Free tools never cost a Lookup; **Pro**-only tools show a *PRO* badge for free accounts.

TOOL	WHAT IT DOES	COST
Live Metal Prices	Gold, silver, platinum, palladium with a ~30-second refresh ticker.	Free
Metal Price Calculator	Quick gram & fractional-oz values from spot.	Free
Metal Calculator	Melt value from composition, weight & spot.	Free
Melt Guard	Find silver coins priced below live melt and raise/trim them.	Free
AI Item Lookup	Identify coins/cards/comics/currency from a photo (no save).	1 Lookup
Greysheet Lookup	CPG bid/ask by year, mint, and grade.	1 Lookup
Cert Checker	Verify a slab on the grader's official site.	Free
Duplicate Cleanup	Find & remove items sharing a product ID.	Free
Value by Denomination	Filter and total inventory by type/denomination/value.	Free
Mass Edit	Select many items and change status or reconcile in bulk.	Free
Inventory Audit	Find data-quality gaps across your inventory.	Pro
CSV Exports	Facebook, Website, Whatnot, eBay, Reddit & auction CSVs.	Pro
Auctions / Scheduled Auctions	Tag items for a live auction with marketplace & schedule.	Pro
Reconciliation	Sync Whatnot orders & reconcile sold PIDs against inventory.	Pro

08 CSV Tools

The **CSV Tools** tab (a Pro feature) generates marketplace and auction exports:

- **Marketplace CSVs** — **Whatnot** and **eBay**, with an **Only active items** toggle to skip archived/sold.
- **Auction CSVs** — pick an **auction tag**, then export a **Whatnot auction** or **eBay auction** CSV in File-Exchange format.

Share any export to **Files, Drive, or Email**.

09 Lookups & upgrading to Pro

A **Lookup** is what you spend when Reliqra does paid work: **AI identify = 1 Lookup** and **Greysheet price = 1 Lookup**. The **melt calculator**, **live spot prices**, **Melt Guard**, **saving items**, and **backups** are all **free**. Your remaining Lookups show in the inventory header and in **Settings**.

Plans, prices, and one-time Lookup packs are listed in Identity, Access & Billing — Plans & prices. When you run out, the app prompts you to upgrade; confirm the purchase through **Google Play**. Your new allowance applies right away and syncs across all your Reliqra surfaces.

10 Settings

The **Settings** tab covers:

- **Cloud sync** — your email, workspace, sync status, **Sign out**, and **Delete account** (with a 30-day grace period).
- **Workspace & team** — switch organizations (if you're on more than one) and, for owners/admins, edit the business name and **manage the team**.
- **Plan & billing** — your tier, **remaining Lookups**, and **Upgrade to Pro / Manage billing** (Reliqra Pro is managed in Google Play, or on the web if you subscribed there).
- **Greysheet® BYOK** — turn on **Bring Your Own Key** and enter your Greysheet API key/token to see wholesale Bid/Ask, drawn from **your** key rather than your Lookups.
- **Backup & restore** — export your whole inventory as **JSON or CSV** (share to Files/Drive/Email), or **restore from a backup** file.
- **App preferences** — toggles for **Show lookup cost labels**, **Auto-identify photos**, **Auto-fill market value**, and **Auto-load sold comps**, plus notification and label-printing settings.

11 Getting help

- **Tier shows Free after paying, or inventory looks empty.** Almost always a sign-in mismatch — confirm you're signed in with the **same method** you used on your other devices (Apple "Hide My Email" creates a separate private address).
- **eBay listing won't go through.** Check the **readiness preflight** on the listing screen — you likely need an inventory location or a fulfillment/payment/return policy set up on eBay first.
- **An item sold but is still live on a marketplace.** Use the item's **Market** tab (or the reconciliation tools) to delist it so you don't sell it twice.

Modern tools for serious collectors and dealers.
